

Empowering Everyone — Local Commerce, Bottom Up

WebServing.com | EmpoweringEveryone.com | WebClerk.com

The Problem

A customer searches for a product online. Amazon shows it from a warehouse 800 miles away. The hardware store 3 miles away has 12 on the shelf — but that inventory is **invisible to the web**.

- **Resources drain from the local economy.** The sale, the tax revenue, the job — gone.
- **Customer relationships are surrendered to Amazon without compensation.**

Centralized Marketplace	Desktop Hosting
15–30% marketplace fees	Zero marketplace fees
Your data belongs to them	Your data stays on your machine
Your customers belong to them	Your customers are yours

The Solution

Every business runs its own commerce system on its own hardware. **Sovereign.** WebServing.com routes customer searches to every local store within 1–10 miles. No central catalog. No fees. The router, not the owner.

4 steps: (1) Install WebClerk — free, open source. (2) Get a domain (~\$10/year). (3) Buy a Mac Mini (\$1,500–\$1,900). (4) Load your inventory — AI assists, free HQ support for 2 months.

	Cost	vs. Amazon/Shopify
Marketplace fees	\$0	Amazon: 15–30% per transaction
AI assistance	\$14/mo (5 staff)	Shopify: \$79–399/month
Hardware	~\$1,700 one-time	Both own your customer relationship

The individual is sovereign. Institutions are agents with limited, enumerated, revocable permissions. — Divided Sovereignty
